RE: Certificate of Service
Petition for Rulemaking
Amendment of Section 73.202(b)
Table of Allotments,
FM Broadcast Stations
(Chester and Richmond, Virginia)

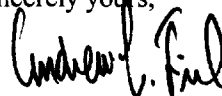

Dear Mr. Caton:

On November 22, 1995, Hoffman Communications, Inc., through counsel, filed a petition for rulemaking to amend the FM Table of Allotments (Chester and Richmond, Virginia). There is an application pending for a construction permit in Richmond, on one of the channels referenced in our petition (MM Docket No. 87-352). We have made several attempts to identify and serve the parties to that application proceeding, as documented by our earlier correspondence to you.

This letter is to notify you that the petition we served on January 11, 1996, upon John J. Schauble, Esq., counsel for Weyburn Broadcasting Limited Partnership, was returned to us by the U.S. Postal Service for an incorrect address. We have obtained a corrected address, and have served Mr. Schauble as indicated on the attached certificate of service.

If you have any questions, please feel free to call me.

Sincerely yours,

Andrew C. Fish

RE: Amended Certificate of Service
Petition for Rulemaking
Amendment of Section 73.202(b)
Table of Allotments,
FM Broadcast Stations
(Chester and Richmond, Virginia)

Dear Mr. Caton:

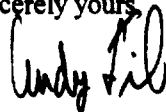

On November 22, 1995, Hoffman Communications, Inc., through counsel, filed a petition for rulemaking to amend the FM Table of Allotments (Chester and Richmond, Virginia). Service was made at that time on the parties to this proceeding, including Lorretta K. Tobin as counsel for Bertram Broadcasting Group.

Ms. Tobin has since informed us that she does not represent Bertram Broadcasting Group. By this letter, we hereby serve Bertram Broadcasting Group directly and the other parties in the above proceeding who were originally served on November 22nd. An amended certificate of service is included with an attached copy of the petition.

Mr. William F. Caton

PETITION FOR RULEMAKING

Hoffman Communications, Inc. ("Hoffman"), licensee of Radio Station WDYL(FM), Channel 221A, Chester, Virginia, by its attorneys, hereby petitions the Commission to: (1) issue a Notice of Proposed Rulemaking to amend the FM Table of Allotments to substitute Channel 266A for Channel 289A at Chester, Virginia, and Channel 289A for Channel 266A at Richmond, Virginia; (2) order WDYL to change channels accordingly; (3) modify the license of WDYL to specify operation on Channel 266A; and (4) order that the pending applications for Channel 266A in Richmond, Virginia be amended to specify Channel 289A in lieu of Channel 266A.

PRELIMINARY STATEMENT

1. WDYL currently operates on Channel 221A, Chester, Virginia with three kw ERP and antenna height above average terrain of 100 meters. Hoffman holds an outstanding construction permit authorizing WDYL to operate on Channel 289A with six kw ERP and 99 meters height above average terrain using a

directional antenna. Hoffman has applied to modify this permit to delete the directional antenna system and to reduce height above average terrain to 98 meters and ERP to three kw.

2. Hoffman has owned and operated WDYL since 1968, airing a religious programming format. WDYL is the only FM station licensed to Chester and therefore has strong ties to the community. WDYL is committed to improving service to Chester and surrounding communities. Substitution of Channel 266A for Channel 289A would permit Hoffman to achieve fully-spaced, six kw Class A operations and serve an additional 105,833 persons.

3. In accordance with the provisions of Sections 1.401 and 1.420 of the Commission's Rules, Hoffman proposes the following change in the FM Table of Allotments (47 C.F.R. § 73.202(b)):

| Chester, Virginia | |
|--------------------|------------------|
| <u>Present</u> | <u>Proposed</u> |
| 289A | 266A |
| Richmond, Virginia | |
| <u>Present</u> | <u>Proposed</u> |
| 233B, 251B, 266A | 233B, 251B, 271B |
| 271B, 279B, 293B | 279B, 289A, 293B |

In effect, Hoffman proposes to exchange frequencies with Richmond. Presently Channel 266A is vacant at Richmond, Virginia, with three applications pending for the Class A frequency. However, Channel 289A may be allotted to Richmond and utilized at any of the application sites for Channel 266A. Similarly, Channel 266A may be allotted to Chester and utilized at WDYL's authorized transmitter site. See Exhibit 1, Technical Exhibit of Graham Brock, Inc. The proposed channel substitution is in the public interest because it would enable Station WDYL

and the successful applicant in the Richmond proceeding to upgrade to fully-spaced maximum Class A facilities from their current short-spaced three kw Class A facilities and to serve an increased number of people. See Exhibit 1, at ¶¶ 2-4.

4. The applications for Channel 266A at Richmond are pending before the Commission and the substitution of channels would not impact or disrupt an authorized or operational facility. Once Channel 266A is allotted to Chester, Virginia, Hoffman will timely file an application on FCC Form 301 to specify operation on Channel 266A.

**THE PROPOSED CHANNEL SUBSTITUTION
IS IN THE PUBLIC INTEREST**

5. Hoffman submits that the benefits of service to additional persons by both Station WDYL and the successful Richmond applicant clearly demonstrate that the proposed channel substitution will serve the public interest. Hoffman's outstanding construction permit to operate WDYL on Channel 289A authorizes six kw ERP with a directional antenna system to limit radiation toward co-channel station WRSF, Channel 289C1, Columbia, North Carolina. So that it may operate nondirectionally, Hoffman has applied to the Commission to modify the permit to delete the directional system and reduce power to three kw. The allotment of Channel 266A in substitution for Channel 289A at Chester, Virginia will allow WDYL to operate nondirectionally with six kilowatts of power and provide service to 662,958 persons in 2507.1 square kilometers. This represents an increase of 105,833 persons over the service Hoffman could

provide under its modified construction permit for Channel 289A.
See Exhibit 1, at ¶ 6.

6. Channel 266A in Richmond is a three kw Class A facility precluded from six kw operation at any of the application sites due to shortspacing with co-channel station WWDC, Washington, DC. The allotment of Channel 289A as a substitute for Channel 266A at Richmond will allow any of the three applicants to operate the Richmond facility as a six kw or equivalent facility. A maximum Class A facility on Channel 289A at the Richmond site currently listed in the Commission's database would provide service to 674,106 persons in 2,495.3 square kilometers. This is an increase of 38,992 persons in an area of 671.1 square kilometers over the service that would be provided under the present three kw allotment. See Exhibit 1, at ¶ 6.

CONCLUSION

The substitution of Channel 266A for 289A at Chester and of Channel 289A for Channel 266A at Richmond clearly serves the public interest. It will allow both WDYL and the successful Richmond applicant to operate with fully-spaced, maximum Class A FM facilities and to serve in each case a substantially greater number of people than could be served with currently proposed

operations. Hoffman respectfully requests, therefore, that the Commission issue a Notice of Proposed Rulemaking proposing the channel substitutions requested herein.

Respectfully submitted,

HOFFMAN COMMUNICATIONS, INC.

PETITION FOR RULEMAKING
HOFFMAN COMMUNICATIONS, INC.
SUBSTITUTE CH 266A FOR CH 289A
CHESTER, VIRGINIA
November 1995

TECHNICAL STATEMENT

1. This Technical Statement and attached exhibits were prepared on behalf of Hoffman Communications, Inc. ("Hoffman"), licensee of radio station WDYL, Channel 221A, Chester, Virginia. Hoffman also holds an outstanding construction permit to change the frequency of WDYL from Channel 221A to Channel 289A at Chester, Virginia (BMPH-930625IF).¹ Hoffman herein requests the substitution of Channel 266A for Channel 289A at Chester, Virginia, and requests that WDYL be ordered to change channels. In order to accommodate this request, Hoffman further asks the Commission to substitute Channel 289A for Channel 266A at Richmond, Virginia.² This represents a non-compatible frequency swap and results in a de facto upgrade for all parties.

PROPOSAL

2. The allotment of Channel 266A to Chester is mutually exclusive with the current Channel 266A allocation at Richmond, Virginia. Hoffman effectively proposes to exchange frequencies with Richmond. In doing so, WDYL may operate a maximum 6.0 kilowatt 100 meter height above average terrain facility (non-directional) at the existing WDYL transmitter

1) WDYL was ordered from Channel 226A to Channel 289A per MM Docket #93-310. Previously the station had been ordered from Channel 221A to Channel 226A in MM Docket #90-67. WDYL is presently operating under Special Temporary Authority on Channel 289A.

2) Presently Channel 266A is vacant at Richmond, Virginia, with five applications pending for the Class A frequency. As

site.³ In addition to allowing WDYL to be a fully spaced maximum Class A facility, exchanging channels with the Richmond applicants will enable all five pending applicants to operate the Richmond facility as a 6.0 kilowatt or equivalent facility. At present Channel 266A in Richmond is a 3.0 kilowatt Class A facility precluded from 6.0 kilowatts at any of the application sites due to a shortspace with co-channel station WWDC, Washington, DC, created as a result of the change in spacing requirements in Docket #88-375.

3. Therefore, Hoffman requests Channel 266A be allotted to Chester, Virginia, in substitution for Channel 289A at reference coordinates: North Latitude 37° 22' 58" and West Longitude 77° 25' 41". While it is not necessary to impose a site restriction from the community, the coordinates specified are those of the current WDYL authorized transmitter site. Exhibit #1 is a usable area map for Channel 266A at Chester, Virginia, and visually demonstrates where a transmitter site would be located to be adequately spaced to all other Commission authorized facilities. Exhibit #2 is a \$73,207 spacing study from the reference site which indicates Channel 266A at Chester complies with the Commission's minimum distance separation requirements. Both Exhibit #1 and #2 assume all of the applicants for Channel 266A at Richmond have been ordered to change to Channel 289A.

4. Channel 289A can be substituted for Channel 266A at Richmond, Virginia, at reference coordinates: North Latitude 37° 33' 13" and West Longitude 77° 27' 38". This is the site currently listed in the Commission's database for the allocation at Richmond, Virginia. Exhibit #3 is a usable area map visually demonstrating where a transmitter site for Channel 289A

3) The current WDYL licensed facility is 3.0 kilowatts at 100 meters height above average terrain. The outstanding construction permit for the facility authorizes 6.0 kilowatts at 99 meters height above average terrain with a directional antenna system under §73.215 rules to limit radiation toward co-channel station WRSE, Channel 289C1, Columbia, North Carolina. Hoffman has, however, filed a modification of construction permit to operate WDYL non-directionally at 3.5 kilowatt and 98 meters HAAT (File #9510251D).

can be located to provide service to Richmond, Virginia. Exhibit #4 is a \$73.207 spacing study from the allocation coordinates demonstrating Channel 289A at Richmond is clear of all other licensed, applied for or proposed facilities. Both Exhibit #3 and #4 assume WDYL is operating on Channel 266A in lieu of Channel 289A. Further, Exhibits #5, #6, #7 and #8 demonstrate that Channel 289A can be utilized at all four sites specified in the five applications for Channel 266A at Richmond, Virginia.⁴

5. Therefore, Hoffman respectfully requests the Commission amend §73.202(b) of its rules as follows:

Chester, Virginia

Present

289A

Proposed

266A

Richmond, Virginia

Present

233B, 251B, 266A
271B, 279B, 293B

Proposed

233B, 251B, 271B,
279B, 289A, 293B

PUBLIC INTEREST ASPECTS

6. The allocation of Channel 266A in substitution for Channel 289A at Chester, Virginia, will enable station WDYL to be a fully-spaced maximum Class A facility at Chester and provide 1.0 mV/m service to 662, 958 persons in 2,507.1 square kilometers. This represents an increase

4) The Weyburn Broadcasting Limited Partnership and James River Communications Company proposed the same site for Channel 266A at Richmond.

of 105,833 persons in 636.3 square kilometers over its proposed modified construction permit (File #951025ID) on Channel 289A. In addition, the substitution of Channel 289A for Channel 266A at Richmond, Virginia, will remove a 3.0 kilowatt limited Class A facility from Richmond in favor of a fully-spaced 6.0 kilowatt 100 meter height above average terrain facility. Channel 289A can be utilized at any of the five pending application sites currently specifying Channel 266A at Richmond. The exchange would result in an overall improvement to the proposed facilities in Richmond. A maximum Class A facility on Channel 289A at Richmond from the allocation reference site will provide service to 674,106 persons in 2,495.3 square kilometers. This represents an increase of 38,992 persons in 671.1 square kilometers over the present 3.0 kilowatt allotment. Similar increases from each of the applicants' sites in Richmond can be expected.

7. Hoffman, therefore, requests the Commission make the above referenced substitution of channels at Chester and Richmond, Virginia; order WDYL to specify operation on Channel 266A at Chester; and order all five applicants at Richmond to amend their pending applications to specify Channel 289A in lieu of Channel 266A. Once Channel 266A is allotted to Chester, Virginia, Hoffman will file an application, FCC Form 301, on timely basis to specify operation on Channel 266A.⁵

8. The foregoing Technical Statement and attached exhibits were prepared on behalf of Hoffman Communications, Inc., by Graham Brock, Inc., its Technical Consultants. All information contained herein is true and accurate to the best of our belief and knowledge. All

5) Since the substitution of channels at Richmond is not for an operational or authorized facility, Hoffman does not pledge reimbursement to any of the five applicants as no actual channel displacement will occur at Richmond. All applications for Channel 266A at Richmond are pending before the Commission.

information relating to FM allocations and facilities was extracted from the NTIA database as updated on September 29, 1995. We assume no liability for errors or omissions in that database which may be adverse to the requests contained herein. All population information was extracted from the 1990 Census, PL94-171 computer files.
